

Application Logic

This diagram explains the **Application Logic** of a web-based system.

Open Web Page

- The user opens the web page, which provides access to different sections.

2. Navigation Options

- **About Us Page:** Loads a **static webpage from S3**.
- **Main Page:** Allows user input.
- **Get Employee Info Page:** Retrieves employee details.

3. User Input Handling

- On the **Main Page**, the user enters:
 - **Name, Location, Technology, and Salary.**
- These inputs are stored in **variables** and then **inserted into the RDS MySQL database**.

4. Employee Information Retrieval

- On the **Get Employee Info Page**, the user enters their **Employee ID**.
- This input is stored in a **variable**, and the system fetches the corresponding details from **RDS MySQL**.

5. Final Output to User

- The stored or retrieved information is processed and displayed to the user.
